

InnoAg More

Because More Matters!

Introducing InnoAg More

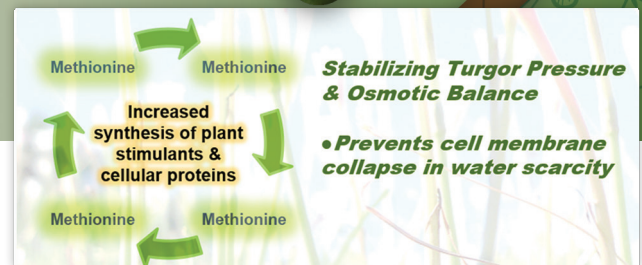

Primary BioAg Innovations™ (PBI) is proud to introduce **InnoAg More**. This product is a storehouse of naturally occurring plant growth nutrients derived from seaweed, *Ascophyllum nodosum*.

InnoAg More is a biologically derived nutritional product that supplies primary and micronutrients to help optimize plant growth. Produced from the cold water seaweed *Ascophyllum nodosum* via a novel lacto-fermentation process, the nutrients in **InnoAg More** are highly bioavailable to plants.

How Does it Give You More?

During the lacto-fermentation process, the seaweed contained in **InnoAg More** is broken down by microbes. During this proprietary process, long chain polypeptides are converted into shorter peptides that are more easily used by the plant. At the same time, the complex polysaccharides from the seaweed are converted into shorter sugar molecules, which can help **re-build the soil microbiome**. After the fermentation process is completed, a micronutrient package is then added to make **InnoAg More** even more for your crops.

INNOVATIONS

Why InnoAg More?

Key Benefits

- Aids root growth. A healthier plant with a stronger root system can absorb greater amounts of available nutrients and water from the soil, thus giving the treated plant a boost against abiotic environmental stresses such as salinity, drought and extreme temperature.
- The Nitrogen, polysaccharides and peptides present in **InnoAg More** promote shoot and leaf growth. This allows for faster plant establishment and more rapid development to the reproductive stage.
- Contains short chain polysaccharides that aid beneficial soil microbial activity, helping to rebuild soil health.

Application & Dosage Rates

For more specific information on usage, and rates and applications of **InnoAg More**, please contact us.
Applications may vary depending on the crop conditions and stage.

Primary BioAg Innovations™ is an agricultural company with a unique and diverse product portfolio including biofertilizers, bionutritionals and biopesticides with a very selective soft chemistry approach. We believe growers need to be equipped with the latest innovations in agricultural products that are differentiated and supported by science. We understand that both biologicals and synthetic chemical based ag products are equally important to our customers. We believe in an integrated approach that yields results to our customers. InnoAg More is a trademark of Primary BioAg Innovations™.

PRIMARY BIOAG INNOVATIONS™ warrants that the product conforms to its chemical description and the intended use of the product is reasonable for the purposes stated on the label when used in accordance with directions under normal conditions of use. PRIMARY BIOAG INNOVATIONS™ shall not be liable for crop injury, ineffectiveness, or any other harm or unintended consequences that may result because of factors such as weather conditions, presence of other material, manner of use or application, or any other cause which is beyond the control of PRIMARY BIOAG INNOVATIONS™. In no case shall PRIMARY BIOAG INNOVATIONS™ be liable for consequential, special or indirect damages resulting from the use or handling of this product. PRIMARY BIOAG INNOVATIONS™ makes no warranties of merchantability or fitness for a particular purpose nor any other express or implied warranty except as stated above.
