

InnoAg Pro

Crop Adjuvant

The Agri-Input Performance Enhancer

Introducing InnoAg Pro

Primary BioAg Innovations™ (PBI) is proud to introduce **InnoAg Pro**, an adjuvant with a unique formulation developed locally in the United States. InnoAg Pro enhances the delivery of plant protection products to plant cells.

How Does it Work?

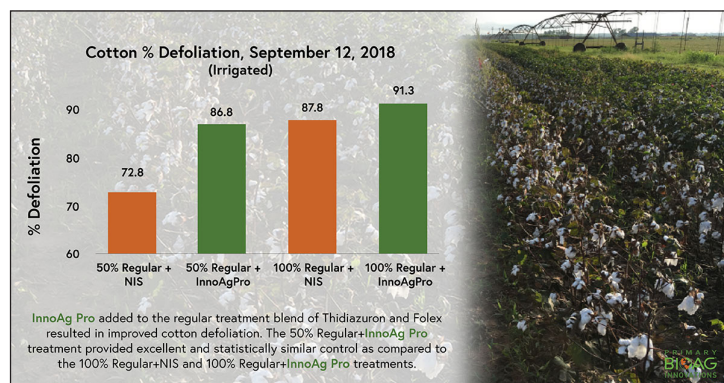

InnoAg Pro contains silicon dioxide and humic acid. Humic substances, such as humic acid, are primordial components of soil fertility and structure. They act on chemical, physical, and biological soil properties. Silicone surfactants help agro chemicals penetrate, disperse, and transport quickly throughout the targeted plant. **InnoAg Pro** enhances the delivery of active ingredients to plant cells as well as the effectiveness of herbicides, fungicides, insecticides, and defoliant thereby aiding the control of tough weeds, plant pathogens, and insect pests.

InnoAg Pro contributes to sustainable agriculture by improving absorption, decreasing the amount of pesticide applied and lowering total costs for pest control. It is compatible with most herbicides, fungicides, insecticides and defoliant.

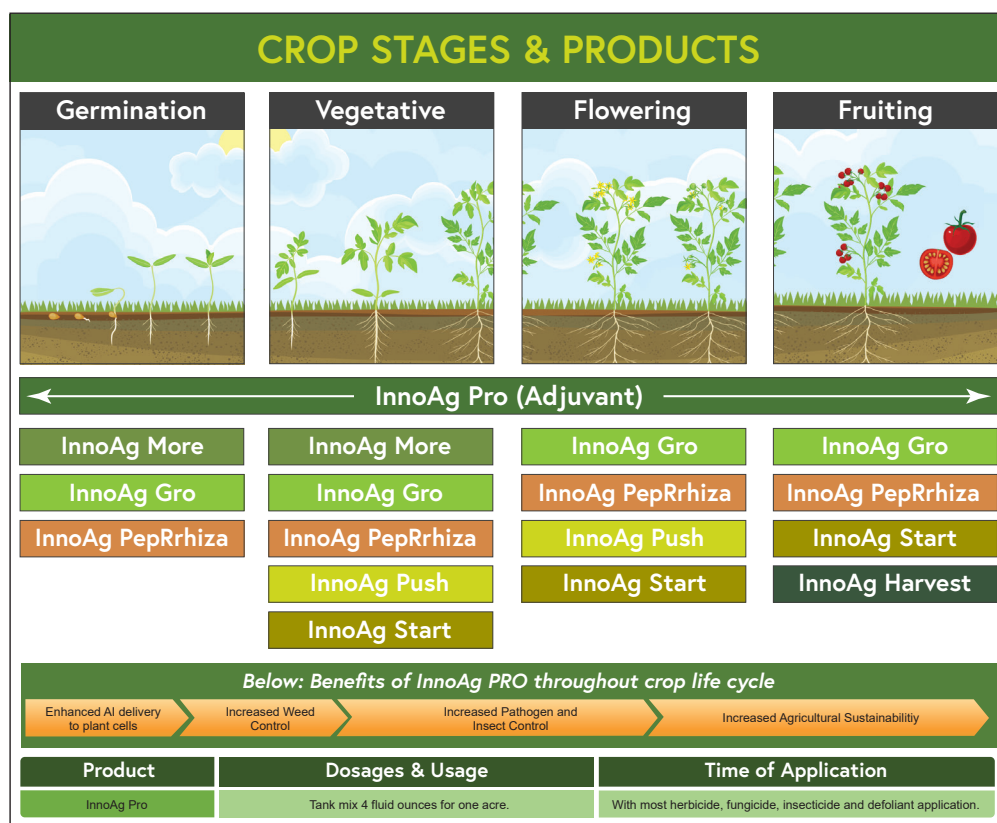

According to Invasive.org (a joint project of the University of Georgia and UDA), adjuvants are chemically and biologically active compounds and improve the effectiveness of the pesticide they are added to by either increasing its desired impact and/or decreasing the total amount of formulation needed to achieve the desired impact. Adjuvants enhance the formulation's ability to kill the targeted species as well as to improve a pesticide's efficacy reducing the total amount of pesticide required to achieve a given effect.

Why InnoAg Pro?

Application & Dosage Rates

For more specific information on usage, and rates and applications of InnoAg Pro, please contact us. Applications may vary depending on the crop conditions and stage.

For more information on how InnoAg Pro can help your crop productivity, please contact info@bioaginnovations.com or visit bioaginnovations.com

Primary BioAg Innovations™ is an agricultural company with a unique and diverse product portfolio including biofertilizers, bionutritional and biopesticides with a very selective soft chemistry approach. We believe growers need to be equipped with the latest innovations in agricultural products that are differentiated and supported by science. We understand that both biologicals and synthetic chemical based ag products are equally important to our customers. We believe in an integrated approach that yields results to our customers. InnoAg Pro is a trademark of Primary BioAg Innovations™.

PRIMARY BIOAG INNOVATIONS™ warrants that the product conforms to its chemical description and the intended use of the product is reasonable for the purposes stated on the label when used in accordance with directions under normal conditions of use. PRIMARY BIOAG INNOVATIONS™ shall not be liable for crop injury, ineffectiveness, or any other harm or unintended consequences that may result because of factors such as weather conditions, presence of other material, manner of use or application, or any other cause which is beyond the control of PRIMARY BIOAG INNOVATIONS™. In no case shall PRIMARY BIOAG INNOVATIONS™ be liable for consequential, special or indirect damages resulting from the use or handling of this product. PRIMARY BIOAG INNOVATIONS™ makes no warranties of merchantability or fitness for a particular purpose nor any other express or implied warranty except as stated above.
